Education

The University of Texas at Dallas

Aug 2022 – May 2026

Bachelor of Science in Computer Science

GPA: 3.91

- **Relevant Coursework:** Computer Architecture, Discrete Maths, Data Structures & Algorithms, Software Engineering, Programming Languages & Paradigms, Probability & Statistics, Database Systems, Linear Algebra, Computer Networks, Digital Logic
- **Organizations:** Association for Computing Machinery at UTD (Member), Artificial Intelligence Society at UTD (Member), Bangladeshi Student Organization at UTD (Member)
- **Achievements:** Academic Excellence Scholarship, Texas Competitive Scholarship, Dean's List, Edexcel High Achievers' Award, The Daily Star Award

Technical Skills

Languages: Python, Java, C/C++, C#, JavaScript/TypeScript, SQL, Assembly, Dart, Lisp, Prolog, VHDL

Frameworks/Libraries: React.js, Next.js, Node.js, Angular, Spring Boot, .NET, Flask, Tailwind CSS, SQLAlchemy, Flutter, Pandas, NumPy, scikit-learn, Matplotlib, D3.js, Chart.js

Developer Tools: Git, Docker, Kubernetes, Linux, Postman, JIRA, Hugging Face, OpenAI API

Cloud & Databases: AWS, Microsoft Azure, PostgreSQL, MySQL, Firebase, Oracle

Experience

Peer Tutor for Calculus & Linear Algebra

Aug 2023 – Present

Student Success Center – The University of Texas at Dallas

Richardson, TX

- Achieved **60%** average grade improvement over **500+** undergraduates by delivering personalized 1:1 tutoring.
- Enhanced concept mastery & confidence of students by tailoring explanations & practice to diverse learning styles.
- Boosted exam readiness & achieved **100%** student satisfaction by creating custom problem sets & step-by-step solutions.

Software Developer Intern

May 2025 – Aug 2025

Paycom

Irving, TX

- Engineered a full-stack **C#/.NET** PDF data extraction pipeline for new client onboarding, projected to generate **\$100K+** savings.
- Cut manual setup by up to **5** days per client by building a **React**-based annotation tool & intelligent table-detection algorithms.
- Reduced manual labeling/review time by **70%** by developing custom **NLP/NER** models for structured entity extraction.
- Designed inference & auto-classification backend services, enabling automated data mapping & speeding up downstream analytics.

Backend Software Developer

Feb 2024 – Apr 2024

Association for Computing Machinery – The University of Texas at Dallas Chapter

Richardson, TX

- Built a **Dart/Flutter** events app for **30K+** students across **50+** university organizations by working in a **Scrum-based 5-person** team.
- Delivered **90%** accurate personalized event recommendations by integrating a **GPT-4 Turbo** chatbot into the user experience.
- Enhanced data retrieval efficiency by **50%** by designing a **Firestore** schema for real-time synchronization.

Projects

Trace | Python, Pandas, NumPy, scikit-learn, Matplotlib, yfinance, D3.js, Chart.js

Apr 2026

- Built a **post-earnings stock prediction platform** at FinHack 2026 for **64 earnings events** across **8 AI-linked companies** by fusing market and text signals.
- Created company, peer, and event-level sentiment features by structuring **news, transcripts, press releases, and video** data.
- Improved pre-earnings signal quality by engineering a **leakage-safe NLP pipeline** with **7-day** windows, spillover features, and conflict indicators.
- Measured lift beyond market-only features by comparing **baseline, company-sentiment, and spillover-enhanced** logistic models.
- Raised test **accuracy** from **50.0%** to **62.5%** and **ROC-AUC** from **0.667** to **0.792** through chronological evaluation.
- Improved interpretability by adding event-level explainability and a **D3.js/Chart.js** dashboard for model comparison and **contagion mapping**.

ReceiptBuddy | Docker, Spring Boot, Angular, PostgreSQL, OpenAI API

Feb 2026

- Developed an **AI-driven, full-stack** web app using **GPT-5.2** that enables users to upload receipt images & track expenditures.
- Cut manual receipt processing by **50%** through automated extraction & analysis of expenditure data.
- Built a dynamic **Angular** frontend that displays all-time/monthly insights, real-time data visualization & spending trends.
- Optimized user experience through **Docker** containerization, ensuring consistent performance across environments.
- Streamlined database setup & management by utilizing **PostgreSQL** for scalable, persistent storage.

InboxIntel | Python, Streamlit, PostgreSQL, Gmail API, OpenAI API

Nov 2025

- Engineered an **AI-powered, full-stack** intelligent inbox assistant using **GPT-5.1** to retrieve & process unread messages in real time.
- Cut manual email processing time by **60%** through automated summaries, prioritization, task extraction, & reply drafts.
- Designed a responsive **Streamlit** interface by building dynamic filters & metrics.
- Reduced duplicate processing by implementing **PostgreSQL** state management & deduplicated query flows.

HydraWatch | Flask, Next.js/React.js, SQLite, SQLAlchemy, ML

Nov 2024

- Built a **full-stack** web app for EOG Resources at HackUTD 2024 to detect hydrate anomalies in gas pipelines in real time.
- Achieved **95%** model accuracy by training a regression model in Google Colab & deploying it via **Flask** for live predictions.

Listernships | Flask, React.js, SQLite, SQLAlchemy

Oct 2024

- Developed a **full-stack** web app with **CRUD** functionalities & a **SQLite** backend to manage & track internship applications.
- Implemented real-time status updates & a responsive **Chakra** UI design to ensure accurate record-keeping across all devices.
